

## **PART 5. IMAGES**

### **2. SAMPLE IMAGES**

A collection of sample images, for both the ALI and Hyperion instruments, can be found at <http://eo1/new/general/imagery/sampleImagesDataSet.html> to illustrate the wide range of types of scenes that EO-1 can capture. The three band numbers used to produce each image are listed in the captions. In addition to the image pictures, full resolution data for a series of themes and locations can be assessed from the USGS/EO-1 website at <http://eo1.usgs.gov>. This data can be obtained by clicking on **SAMPLES**, then on a particular theme/location shown on the U.S. map, and finally on **Download** for either ALI or Hyperion data. This data information allows one to “experiment” with analyzing EO-1 image data.
