

ALI Imagery of Burn Scars Near Athens, Greece (Aug. 2009)

August 27, 2009
False-Color EO-1 ALI Burn Scar Product
Near Athens Greece

Unburned vegetation is bright green, while burned areas are clearly visible as dark red. The remaining forests around the city are dark green, while irrigated lawns and other crops are lighter green. The city in the lower left corner of the image is slightly blue.

True-Color Image from ALI
Near Athens, Greece

This close-up image shows the dark brown of the charred plants on the burned hills near Athens. The unburned land is, for the most part, tan or dull green in the late summer, though patches of deep green (irrigated vegetation) are also visible.
